

RECYCLING WASTE

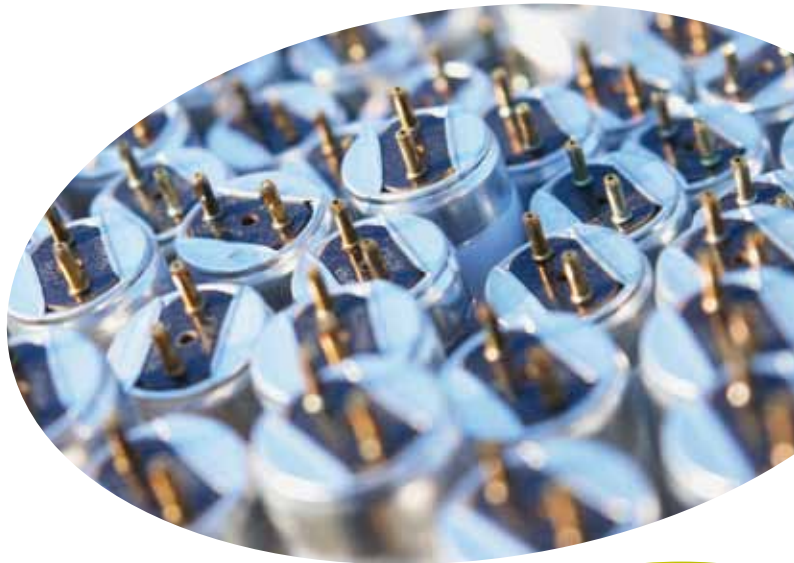

With increasingly stringent waste disposal legislation, such as the Hazardous Waste (England and Wales) Regulations 2005 and the Landfill Directive, the need to segregate and recycle hazardous waste such as batteries, fluorescent light tubes and aerosols has become a major concern for many organisations.

At PHS Wastemanagement we are committed to developing highly efficient and environmentally conscious processes. This is as evident in how we manage our business, as it is in the services we provide our customers.

As one of the UK's leading waste management providers, we are acutely aware of the environmental impact of our operation and make every effort to manage our business in a sustainable manner.

Alongside our clear focus on providing products tailored to meet our customers' needs, this commitment means that PHS Wastemanagement can always be relied upon to offer the most reliable and environmentally-effective service.

We specialise in the provision of innovative services such as the collection and recycling of fluorescent light tubes and sodium lamps in our state of the art wet and dry treatment facilities. We are market leaders in the field of aerosol recycling. Our cutting edge technology means that our plant is the only dedicated site in Europe capable of recycling 100% of the aerosol, including the can, contents and propellant gas, helping our customers minimise the environmental impact of their waste and offer a genuine improvement on current practices.

COST EFFECTIVE DISPOSAL SOLUTIONS

At PHS Wastemanagement, we pride ourselves on offering the most environmentally effective treatment options for all hazardous and non-hazardous waste.
